Relativistic Alpha Field Theory (RAFT): Part II Branko Novakovic

The purpose of this book is to provide an introduction to the analysis techniques used in the new Relativistic Alpha Field Theory (RAFT). This theory is based on the well known Einstein's Special and General Theory of Relativity (SRT, GRT). Precisely, this theory is an extension of the GRT to the region of the extremely strong gravitational fields. As it is well known GRT cannot be applied to the extremely strong gravitational field at the Planck's scale, because of the related singularity. In this book it has been shown that the Relativistic Alpha Field (RAF) theory extends the application of GRT to the extremely strong fields, including the Planck's scale. This is the consequence of the following predictions of RAF theory: a) no a singularity at the Schwarzschild radius, $r_{sch} = 2GM/c^2$, b) there exists a minimal radius at $r = (GM/2c^2)$ that prevents singularity at $r = 0$, i.e. the nature protects itself, c) the gravitational force becomes positive (repulsive) if $(GM/rc^2) > 1$, that could be a source of a dark energy, and d) unification of electrical and gravitational forces can be done in the standard four dimensions (4D). Here M is a gravitational mass, G is the Newton's gravitational constant, r is a gravitational radius and c is the speed of the light in a vacuum. The key point in this theory is an introduction of the field parameters alpha and alpha prime. These parameters are dimensionless functions of the potential energy of a particle in an alpha field. Here an alpha field is a potential field that can be described by the mentioned two field parameters. To this category belong, among the others, an electrical field and a gravitational field. The solution of the field parameters is based on the assumption that the field parameters should connect geometry of the line element with potential energy of a particle in an alpha field. In that case, the left side of the Einstein's field equations automatically generates the energy-momentum tensor on the right side of these equations. As it is well known, in GRT we should add by a hand the energy-momentum tensor on the right side of the Einstein's field equations, as in the Einstein-Maxwell theory. In the case $\alpha = \alpha' = 1$ (i.e. any potential field does not exist), the all items in the GRT is transformed into the related items in the SRT. On that way, RAF theory connects Special and General Theory of Relativity. Since the field parameters are functions of the potential energy of a particle in dimensionless form we can adding the potential energy of the two or more potential fields. On that way, in this book we show the unification of the electrical and gravitational fields in the standard four dimensions (4D). The condition for appearance of the positive (repulsive) gravitational force, $(GM/rc^2) > 1$, can be realized at the Planck's scale, but also at the universe scale for massive objects with small radius, when $(M/r) > (c^2/G)$. In that sense in the book it has been presented that the source of the dark energy could be the positive gravitational force. As the conclusion, we can say: if RAF theory is correct, then it could be applied to the both weak and strong fields at the Universe and Planck's scales giving the new light to the regions like black holes, quantum theory, high energy physics, Big Bang theory and cosmology.

From reader reviews:

Valerie Hemming:

This Relativistic Alpha Field Theory (RAFT): Part II usually are reliable for you who want to be a successful person, why. The explanation of this Relativistic Alpha Field Theory (RAFT): Part II can be one of the great books you must have is giving you more than just simple reading food but feed you with information that possibly will shock your before knowledge. This book is definitely handy, you can bring it everywhere you go and whenever your conditions in e-book and printed kinds. Beside that this Relativistic Alpha Field Theory (RAFT): Part II giving you an enormous of experience for example rich vocabulary, giving you test of critical thinking that we realize it useful in your day task. So , let's have it and luxuriate in reading.

Elsie Fiala:

Reading a e-book can be one of a lot of exercise that everyone in the world loves. Do you like reading book consequently. There are a lot of reasons why people love it. First reading a e-book will give you a lot of new info. When you read a book you will get new information because book is one of a number of ways to share the information or perhaps their idea. Second, reading through a book will make an individual more imaginative. When you studying a book especially hype book the author will bring someone to imagine the story how the character types do it anything. Third, you could share your knowledge to others. When you read this Relativistic Alpha Field Theory (RAFT): Part II, you could tells your family, friends in addition to soon about yours guide. Your knowledge can inspire average, make them reading a guide.

Kori Pierson:

Does one one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Try to pick one book that you find out the inside because don't judge book by its cover may doesn't work this is difficult job because you are frightened that the inside maybe not since fantastic as in the outside seem likes. Maybe you answer can be Relativistic Alpha Field Theory (RAFT): Part II why because the wonderful cover that make you consider in regards to the content will not disappoint anyone. The inside or content will be fantastic as the outside or perhaps cover. Your reading 6th sense will directly direct you to pick up this book.

Timothy Grill:

A lot of publication has printed but it differs. You can get it by web on social media. You can choose the top book for you, science, amusing, novel, or whatever simply by searching from it. It is called of book Relativistic Alpha Field Theory (RAFT): Part II. You'll be able to your knowledge by it. Without leaving behind the printed book, it may add your knowledge and make anyone happier to read. It is most important that, you must aware about reserve. It can bring you from one destination for a other place.
