Cosmological and Black Hole Apparent Horizons (Lecture Notes in Physics)

Valerio Faraoni

Cosmological and Black Hole Apparent Horizons (Lecture Notes in Physics) Valerio Faraoni

This book overviews the extensive literature on apparent cosmological and black hole horizons.

In theoretical gravity, dynamical situations such as gravitational collapse, black hole evaporation, and black holes interacting with non-trivial environments, as well as the attempts to model gravitational waves occurring in highly dynamical astrophysical processes, require that the concept of event horizon be generalized. Inequivalent notions of horizon abound in the technical literature and are discussed in this manuscript.

The book begins with a quick review of basic material in the first one and a half chapters, establishing a unified notation. Chapter 2 reminds the reader of the basic tools used in the analysis of horizons and reviews the various definitions of horizons appearing in the literature. Cosmological horizons are the playground in which one should take baby steps in understanding horizon physics. Chapter 3 analyzes cosmological horizons, their proposed thermodynamics, and several coordinate systems. The remaining chapters discuss analytical solutions of the field equations of General Relativity, scalar-tensor, and $f(R)$ gravity which exhibit time-varying apparent horizons and horizons which appear and/or disappear in pairs. An extensive bibliography enriches the volume.

The intended audience is master and PhD level students and researchers in theoretical physics with knowledge of standard gravity.

From reader reviews:

Anthony Moss:

Do you have favorite book? If you have, what is your favorite's book? Book is very important thing for us to be aware of everything in the world. Each reserve has different aim as well as goal; it means that publication has different type. Some people sense enjoy to spend their time to read a book. They can be reading whatever they get because their hobby will be reading a book. Consider the person who don't like reading a book? Sometime, particular person feel need book once they found difficult problem or maybe exercise. Well, probably you should have this Cosmological and Black Hole Apparent Horizons (Lecture Notes in Physics).

Brooks Davis:

You can spend your free time to read this book this book. This Cosmological and Black Hole Apparent Horizons (Lecture Notes in Physics) is simple to deliver you can read it in the park your car, in the beach, train and soon. If you did not include much space to bring the particular printed book, you can buy the e-book. It is make you easier to read it. You can save typically the book in your smart phone. And so there are a lot of benefits that you will get when you buy this book.

Ira Atwood:

Many people spending their time frame by playing outside with friends, fun activity with family or just watching TV the entire day. You can have new activity to shell out your whole day by reading a book. Ugh, do you think reading a book really can hard because you have to use the book everywhere? It all right you can have the e-book, getting everywhere you want in your Smartphone. Like Cosmological and Black Hole Apparent Horizons (Lecture Notes in Physics) which is getting the e-book version. So , try out this book? Let's observe.

Nancy Williams:

Is it anyone who having spare time then spend it whole day by simply watching television programs or just lying on the bed? Do you need something new? This Cosmological and Black Hole Apparent Horizons (Lecture Notes in Physics) can be the solution, oh how comes? A book you know. You are thus out of date, spending your spare time by reading in this brand new era is common not a geek activity. So what these guides have than the others?
