Amazon's Echo device is comprised mainly of a voice command and wireless speaker, with a compact CPU to enable simple computation and executions. Like Siri and Cortana, Apple and Microsoft versions of the Voice Command Assistant, Echo responds to the name 'Alexa'. The biggest difference between Echo and its peer group is that Echo is designed to be accessed by anyone in its environment, that it can 'hear'. The only empowerment Alexa needs to assist you, your family or your friends is Wifi and a query.

While Alexa, Siri and Cortana differ in presentation, that is not the only unique attribute Alexa possesses. Developers have direct access to Alexa's platform and ability to extend it.

As an 'out of the box' product, Alexa is able to perform the following executions:

Calendar, Weather, General Search, ToDo List, Music, News, Timer and Alarm. Again, these are also common executions in the command function of Siri and Cortana.

This book will provide simple instruction for beginning programming of Alexa to provide, search or compile certain, defined information.

#### **The subjects covered in this text will be:**
